Amendments to the Claims

This listing of claim will replace all prior versions and listings of claim in the application.

1. (currently amended) A computer-implemented method for determining whether information in an electronic document should be updated, comprising the steps of:

identifying, in the electronic document, a string having a unique identifier associated with the string, wherein the unique identifier indicates the type of reference material source that will contain information associated with the string;

after the step of identifying, creating a request for information <u>including</u> associated with the unique identifier;

upon creation of the request, selecting one of a plurality of types of reference material sources based on the request for information unique identifier, wherein the selected reference material source includes the information associated with the string unique identifier;

accessing the selected reference material source to obtain the information associated with the <u>string unique identifier</u>; and

after the step of accessing, automatically comparing the <u>obtained</u> information associated with the unique identifier to the string to determine whether the string should be updated with the <u>obtained</u> information associated with the unique identifier.; and

if the obtained information is different than the string in the electronic document, replacing the string with the obtained information.

2. (currently amended) The method of Claim 1, wherein the step of comparing the information associated with the unique identifier to the string to determine whether the string is valid, further comprises the step steps of:

if the <u>obtained</u> information associated with the unique identifier matches the string, then determining that the string is valid.; and

otherwise, determining that the information associated with the unique identifier updates the string.

3. (canceled)

4. (currently amended) The method of Claim 1, wherein the string is a name and the

selected reference material source is an address book database.

5. (currently amended) The method of Claim 1, wherein the string is an address and the

selected reference material source is an address book <u>database</u>.

6. (currently amended) The method of Claim 1, wherein the string is a value associated with

a stock symbol and the selected reference material source is a real time stock quote <u>database</u>.

7. (currently amended) A computer-implemented method for providing directions reference

material to a user, comprising the steps of:

receiving a request from a user for directions to a destination a selected reference

material associated with a unique identifier;

determining that an identifier for the user of the selected reference material matches

the unique identifier of the selected reference material, and if so:

creating a request for information requesting directions to the destination the selected

reference material and, wherein the request for information includes the identity of identifying the

user;

upon creation of the request, selecting a reference material source based upon the

request for information;

accessing the selected reference material source to obtain the directions to the

destination, wherein the directions are based in part on the identity of the user selected reference

material; and

after the step of accessing, providing the directions to the destination to the user,

wherein the directions to the destination begin where the user is geographically located selected

reference material in a manner that is relevant to the identified user.

8. (canceled)

- 3 -

9. (Original) The method of Claim 7, wherein the selected reference material source is one

of a plurality of reference material sources, and at least one of the reference material sources is a

remote server.

10. (Previously Presented) The method of Claim 7, further comprising the step of accessing

the selected reference material source via a network.

11. (currently amended) A system for integrating selected reference material into an

electronic document, comprising:

an application program for creating the electronic document and creating a request for

information to obtain the a selected reference material, wherein the electronic document includes at

least one paragraph having at least one key word comprises a string having a unique identifier

associated with the string, wherein the application program monitors actions of a user, wherein the

request for information is created through a prompt provided to the user based on the monitoring of

the actions of the user, and wherein the request for information includes the at least one key word

comprises the unique identifier; and

a reference engine for receiving the request for information from the application

program, selecting one of a plurality of reference material sources based upon the request for

information, and accessing the selected reference material source to obtain the selected reference

material and providing the selected reference material to the user.; and

the plurality of reference material sources for providing the reference material.

12. (canceled)

13. (canceled)

14. (currently amended) The system of Claim 11, wherein the user's identity is relevant to

the request for information, and wherein the request for information <u>further</u> comprises an identifier

for the user.

- 4 -

15. (canceled)

16. (currently amended) The system of Claim 11, wherein the application program is a word

processing program having a selected language, and wherein the request for information <u>further</u>

comprises an identifier for the selected language.

17. (Original) The system of Claim 11, wherein one of the plurality of reference material

sources is a dictionary in a first language and another one of the plurality of reference material

sources is a dictionary in a second language.

18. (Original) The system of Claim 11, wherein one of the plurality of reference material

sources is an address book associated with an electronic mail application program.

19. (currently amended) The method of Claim 18, wherein the request for information

further includes comprises a unique identifier associated with an entry in the address book, and

wherein the reference engine selects the address book as the selected reference material source based

upon the unique identifier.

20. (currently amended) The system of Claim 11, wherein the request for information

comprises key words summarizing at least one key word summarizes the content of the at least one

paragraph in the electronic document.

21. (Original) The system of Claim 11, wherein one of the plurality of reference material

sources is a remote server.

22. (Original) The system of Claim 11, wherein one of the plurality of reference material

sources is accessed via a network.

- 5 -

23. (Withdrawn) A computer-implemented method for integrating a dictionary into a user interface of an application program, comprising the steps of:

integrating a dictionary into an application program so that in response to a selection of a dictionary control provided in the user interface of the application program, a dictionary interface is displayed on a display device;

receiving a request for a selected word;

creating a request for a definition of the selected word;

based upon the request for a definition, selecting one of a plurality of dictionary files corresponding to different fields having a specialized vocabulary;

upon selection of the dictionary file, accessing the selected dictionary file to obtain the definition of the selected word; and

providing the definition of the selected word so that the definition is displayed in the dictionary interface.

24. (Withdrawn) The method of Claim 23, wherein receiving a request for a selected word comprises:

receiving the selected word via the dictionary interface.

25. (Withdrawn) The method of Claim 23, wherein the dictionary interface includes a language control and wherein receiving a request for a selected word comprises:

receiving a selected language via the dictionary interface.

26. (Withdrawn) The method of Claim 23, wherein the dictionary interface includes a language control and wherein selecting one of a plurality of dictionary files comprises:

selecting one of a plurality of dictionary files associated with a language specified by the language control.
